

Zerene Settings

[Zerene Stacker](#) is used to create the composites that are stitched into the final image.

Zerene Stacker settings CAN be saved and the "standard" settings which we ship on a new system are available in the C:/GIGAmacro/ folder of your system.

To load the settings, start Zerene and choose Options>Preferences. On the lower right of the Options>Preferences box, click on 'Load', and navigate to your preferences file.

The default Preference settings are saved in The GIGAmacro/Settings folder on your computer. When selected, click 'Open' and the default preferences are loaded; click 'Apply' and then 'OK'

If you experiment with settings, or have more than one file for settings, these can be saved via the Options>Preferences dialog box.

TIP

If you save your own settings, e.g. to produce a depth-map as well as an optical image set, be sure to save the file with a meaningful and NEW filename, otherwise you may overwrite the default file.
